Changelog

All notable changes to this project will be documented in this file.

The format is based on Keep a Changelog and this project adheres (aspirationally) to Semantic Versioning.

Unreleased

Added

- Explicit Pet Pydantic schemas: `PetBase`, `PetCreate`, `PetUpdate`, `PetOut` replacing auto-generated `PetIn` / `PetOut`.
- Serializer helpers: `serialize_pet`, `serialize_pet_list` for consistent, explicit response shaping.
- Documentation updates across root `README.md`, backend `README.md`, and `.github/docs/Pet-Schemas.md`.

Changed

- Ownership now enforced server-side: incoming `owner_id` is overridden with authenticated user id.
- Pets router refactored to remove manual inline `PetOut.model_validate` constructions.

Deprecated

- Supplying `owner_id` in create/update payloads (will be ignored and later removed from `PetCreate`).

Security

- Eliminated possibility of privilege escalation by forging `owner_id` in pet creation/update.

Planned

- Remove `owner_id` from `PetCreate` once frontend updated.
- Introduce `PATCH /api/pets/{id}` using `PetUpdate`.
- Add unit tests for serialization and ownership enforcement.
- Add status transition rules (e.g., `found` after `lost`).

0.1.0 - 2025-09-01

Added

- Initial project structure (FastAPI backend + SvelteKit 5 frontend).
- User authentication with access + refresh tokens.
- Pets CRUD, QR code generation, banners endpoint scaffold.
- Basic i18n integration (Paraglide) and error localization.
